Pain can prevent you from being able to live an active happy life. We utilize neurological chiropractic techniques as well as cold laser and other modalities including shock-wave to identify and treat the pain at the source. Our doctors can create a specific plan to help you reduce or eliminate the use of addictive drugs for pain symptom relief. All of our approaches to pain management are drug free and targeted to eliminate the cause when possible or manage and prevent exacerbation of chronic conditions. Many of our clients who suffer from aches and pains report significant improvement in just one treatment. Dr. Turner is renowned for his pain protocol that he teaches to other chiropractic physicians. Experience the difference for yourself. https://www.shockwavecenters.com/

What is Shockwave?

When an injury occurs within your body, your body immediately implements its own healing mechanisms to help naturally repair and restore the tissue, bone, cells and other compromised areas affected by the injury.

When you experience chronic pain, your body is no longer recognizing that there is an injury to that area. As a result, it shuts down the healing process and no further relief is provided, leaving you in a constant state of pain.

The shockwave therapy provided by Shockwave Centers of America penetrates deep into your soft tissue, causing a microtrauma or new inflammatory condition to the treated area. This “new injury” triggers your body's natural healing response once again. The energy emitted into the area also causes the cells in the soft tissue to release certain bio-chemicals that intensify the body's natural healing process. These bio-chemicals allow for the building of an array of new microscopic blood vessels in the soft tissue.

The strong energy pulses that are applied to the affected area for short periods of time stimulates cells in the body that are responsible for bone and connective tissue healing. In many instances, shockwave therapy treatments have proven to be effective in cases where the human body has not been able to heal itself on its own.
