PEMF Pulsed Electromagnetic Field Therapy:
We are a "Certified Pulse Center"

PEMF affects the charge of the cell membrane, and allows membrane channels to open up, nutrients enter the cell, and waste products move out of the cell more easily. This helps to restore optimum cellular function allowing the entire body to function better. Maintaining the function of every individual cell at an optimal level is also important in slowing the aging process. Cellular "injury," the state of a cell when it is not healthy, leads to disease conditions. Magnetic fields balance cells, tissues and bodily functions at very fundamental level. Using a PEMF therapy device daily rejuvenates your cells and increases their metabolism by:

- **Improving ATP (energy) production**
- **Increasing oxygen supply to cells**
- **Enhancing circulation**
- **Facilitating detoxification of the body**
- **Allowing for a better absorption of nutrients**

Other uses for PEMF:
Support for muscles, tendons and ligaments in recovery from exercise, injury and strain. It has shown to be beneficial in bone regeneration and maintaining density and bone regrowth; helps with wound healing by increasing the stimulation of new cell growth and the output of current cells. Studies have shown much improvement in migraines, reducing pain and inflammation.
